MerFen Security Ltd

Audibility System - MF009 - MF010

Speech Transfer System

Medium Noise Environment Audibility System

The new MF009 and MF010 range of Speech Transfer System have been designed with the facillity to allow the use of a headset to ensure that each transcation can be conducted clearly, effciently and wihtout difficulty or delay.
This sysyem has now been installed in a number of locations that have proved to be a difficult acoustic environment for effective operation of standard speech systems.

The initial trial site was in conjunction with the facilities company of a national Train Operating Company. This was due to continued communication issues between the staff and the customer across a number of sites. With the system installed, these communication issues and the frustration this caused to both the staff and customers alike, have been eliminated.

MerFen Security Ltd
